Bassi Seminatrici has been operating with the precision mechanical seeders for 50 years, during which the team developed several technical innovations to improve the quality of seeding, always putting in first place the simplicity of operation and maintenance of the machines.

Being a small company, Bassi Seminatrici is not limited to offer a standardized product, but is able to meet any request of the customers. The seeders can sow all kinds of vegetables, medicinal and aromatic herbs, legumes and cereals, both naked and pelleted seeds. In recent years, in addition to working for the domestic market, Bassi Seminatrici increased in requests even from foreign countries.

## BERTI MACCHINE AGRICOLE

BERTI Macchine Agricole SPA, based near Verona (Italy), for over 60 years has been engaged in the design, production and distribution of a wide range of more than 500 models of flail mowers, mulchers and shredders.

They are suited for the most varied possible applications such as orchards, vineyards, forestry, open field cultivation, landscape management, road-side, green areas and reclamation of abandoned areas.

The entire range of machines is offered divided into two main product lines: the Agricultural Line (to be operated by tractors from 15 HP until 350 HP) and the Professional Line (hydraulically driven by excavators and skid loaders).

Through the industrial choice of the specialization, BERTI has been able to employ all the own resources in the development of extremely reliable, qualitative and high performing products.

The modern and innovative automated production plant, the constant commitment in research and development, the TUV certifications of quality, safety and healthy environment testify and strengthen the seriousness of our way of doing business and our position on markets all over the world.

## BICCHI

Via G. Chiarini, 53

CaBa Industrie is based in Faenza and produces a high variety of agricultural machines for orchards and vineyards. We manufacture durable machines, whose purpose is to provide a high quality and biological agriculture, especially for in-row cultivation, pruning, spraying and harvesting. CaBa manufactures three different multi-functional brands: Lotti, Vicar and Macfruit. Lotti in-row cultivators and trimmers could be equipped with various interchangeable tools to carry out different operations in soil working and leaf canopy management. Vicar revolutionary turbine sprayers are able to generate a constant airflow, ensuring a considerable drift reduction thanks to their spraying precision. Macfruit innovative range of fruit harvesters are the right solution to carry out any operation in your orchard.

Planting is our business", but it is also our mission.

Our company FERRARI is specialized in manufacturing mechanical vegetable transplanters (see Ferrari models FMAX, FX, FPA etc.) as well as fully automatic transplanters (specifically Ferrari FUTURA) which significantly reduce labour costs.

The transplanters can be tractor-pulled, with draw-bar assembly or in a self-propelled version. The machines fulfil the task to open the furrow in the soil, lay the seedling in upright position and close the furrow compacting the soil around the plant. Our machines are suitable to work with a wide variety of vegetables such as lettuce, brassicas, celery, tomato...

Our product range consists also of automated weeders (see Ferrari REMOWEED and REMOLITE) projected to remove weeds around the plants and eliminate the amount of chemical weed killers...

Soil-working equipment, Equipment for sowing, planting and manuring, Equipment for handling and transport, Equipment for conditioning of products after harvest and livestock husbandry,

Martignani can be introduced as a result of the short story of a long passion, dedicated to the development of a cutting-edge technique for a more efficient, cost-effective and more environmentally sustainable protection of plants, while respecting the health of agricultural workers and agricultural food products consumers.

This story began in 1958 when Claudio Martignani, founder and today co-owner - with his son Stefano - of the Company that bears the same name, presented and began to spread in Romagna, the Italian homeland region of Sangiovese wine, particularly devoted to wine production and fruit growing, the first pneumatic blowers with low water volume, resulting from a joint initiative of expert Dutch plant pathologists that dates back to 1946.

Martignani continues on one's way, introducing first in Europe the Electrostatic Spraying System (1981), the only one tested in Italy and abroad with phytotherapeutic results. Already established in farming practise with thousands of vine and fruit-growers throughout the world, it represents one of the most important contributions towards progress in research into new solutions able to optimize application techniques. These innovations, regularly subjected to University Field Tests with published phytotherapeutic results, have been awarded in the most important international competitions as "Technical Innovations", creating trend among other manufacturers.

MASCAR SPA arises from the passion of the family Maschio for agricultural machinery.

A passion founded on the ability to deal with the entire production process of the machines with a modern high technology system.

However, our Project grows every year, especially for the professional value, the respect and the importance we give, every day, to the relationship with our customers.

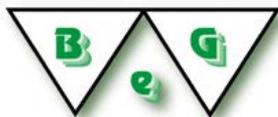

The products of our manufacturing range are round balers, round bale wrappers, seed drills, precision planters and cultivators.

We produce the 95% of our equipment granting a high-quality control on all the machine's parts: assembly, laser cut, bending and welding tools, painting station and automation of spare parts warehouse make our product trustable and reduce our lead-time for a great satisfaction of our customers.

## Officina Meccanica

### OFFICINA MECCANICA B E G

B E G is specialized in mechanical pruner production for cutting fruit trees.

Their success is the double blade bar, the only one existing in the world, with its cutting capacity from a 0/0 mm up to 0/90 mm (3.5 in).

Compared to discs they guarantee many advantages for trees: they do not damage the cut branch, they do not produce sawdust which obstructs tractor air system and causes illnesses transmission. The cut is very clean, similar to scissors, the operator can work while seated, the cut material is not scattered in the air. These pruners do not consume a lot of fuel and they need a very poor maintenance. We also produce disc pruners and shredders for inter rows.

THE ALTERNATIVE TO FIGHTING WEEDS AND FUNGAL DISEASES WITHOUT USING CHEMICALS

Officine Mingozzi has been building, researching on and expanding the applications of flame weeding technology since the second half of the 80's. Sturdiness, ease of use and reliability added to top-level technical and safety standards make the machines synonymous with QUALITY. We offer FIELD SOLUTIONS, not just agricultural machines. The main advantage of flame weeding lies in that no harmful waste is left on the ground; in fact, LPG burns forming water vapour and carbon dioxide only. By choosing this technology, costs are easy to estimate as this flame weeding technique does not pollute the environment, there are no extra after-treatment costs or disposal of toxic waste.

The story of Ortomec began about 20 years ago, when the four founders gave birth to Ortomec Srl.

They already had a long experience and great knowledge of two different but, in a certain sense, complementary sectors: the engineering sector and the horticultural sector.

Today, Ortomec Srl is a company appreciated all over the world and present on the international market as manufacturer and distributor. The company offers trailed and self-propelled harvesters and seeders for the horticultural market.

Thanks to our versatility and experience, we build customized machines able to satisfy the needs and requests of every horticulturalist. Supported by a highly specialized technical and electrical department, the company currently develops with the most up-to-date and modern technologies.

Peruzzo company has been established since 1959 founded by Adriano Peruzzo. Peruzzo moved its production from purely agriculture items specializing into engineering sport courses maintenance equipment and on shredders to get biomasses for energy purpose.

Nowadays Peruzzo steady the turf equipment sales on all national market and cooperate with over 80 importers worldwide.

Peruzzo export 80% of its production. Peruzzo has been always "customer care oriented" therefore achieved high quality standard improving its machines, operators safety working and production performances. The wide range of machines produced (flail mowers, multi-functional walk behind mowers, chippers, shredders and much more), is known all over the world for its construction quality, the quality of cutting and for a 100% Made in Italy product.

## REPOSSI

Repossi Macchine Agricole has been owned by the Reposi family for four generations. The company designs and manufactures hay-making machines and equipment for animal husbandry.

Its history is marketed by the first trailed basket-rake (called the Fortuna), which was joined over the years by other types of rake (double, triple and electro-hydraulic basket rakes; finger wheel rakes and rotary rakes), hay tedders, machines for barns, etc., right up to the current wide range of products and services, which result from a high degree of specialization and expertise.

In 2018-2019 the company obtained important exclusive funding from the European Commission (Horizon 2020) for the RA-Rake, a new double star wheel rake. Reposi has also been ISO 9001 quality certified.

## RIBERI

*Click here to stay in touch*

The Riberi company was founded in the mid 60's by Mr. Sergio Riberi. Through hard work, dedication, and the expertise of their good staff, the Riberi Company soon became a leader in the production of forage self-loading cutter wagons. The company gained the confidence of Italian farmers and agricultural machinery dealers, offering them high quality tailored solutions. It soon became known all over Europe and around the world.

In 2019, the company renewed itself and integrated its historic production with the addition of hay making machines, becoming part of the Ag Division of a larger group, the Damilano Group. In this way history and modernity find an excellent synthesis with the shared purpose of manufacturing innovative machines for sustainable agriculture.

ROC is an Italian company specialized in professional hay merger manufacture for forage dehydration, biomass and biogas plants and for big farms specialized in hay, silage and straw production.

Roc mergers are sold in 39 countries all over the world. Its range includes both front-mounted and trailed mergers with a working width from 3 mt (10') to 12 mt (40') of the biggest unit on the market, RT 1220.

ROC mergers are designed to work up to 2000/2500 hours per year, in heavy-duty conditions too, they are made of top-quality materials and they are particularly suitable for alfalfa, forages, wheat straw and oat straw, reducing dust and stone content in the crop and avoiding any loss of lucerne leaves.

ROC high automation level is guaranteed by modern numerical control robotic machines and by a state-of-the-art technology of the industrialization of the production system.

Salvarani s.r.l. was founded in 1983 in the heart of Emilia Romagna, a region that boasts a long history in the field of components for agricultural machinery.

Salvarani s.r.l. offers a complete range of products and components for agricultural and slow-moving machinery (Control Boxes, Foam Markers and Cables), with a specialization in spraying.

Salvarani's priorities are:

- Innovation
- Simplicity and reliability of the product. Assistance and after-sales support

This translates into products of a high technological standard and specialized services capable of guaranteeing competitiveness and economic advantages for manufacturing companies, sales networks and users.

The company also offers its experience for the development of customized projects.

The company has three production plants: Salvarani s.r.l. Headquarters Poviglio, Italy. AAMS-Salvarani, Belgium. Salvarani Rom, Romania. The importer in USA is SNA MFG LLC, 30101 Acworth, GA, tel. 001 866-327-3880

The company was founded in 1969 by Franco Selvatici and has always been characterised from the outset by the production of high-tech tools for intensive, high-productivity agriculture. The historic headquarters have always remained in the province of Bologna. Since 2014, engineer Lorenzo Selvatici (the founder's son) has been president of Selvatici srl.

The company specialises in the production of agricultural machinery for soil preparation such as spading machines, bivangas, post hole diggers and rear scrapers. In addition, there is a line for professional gardening including aerators and sand spreaders. New implements have recently been introduced to the range, such as spading machines for two-wheel tractors, stone buriers, bed formers, a small range of subsoilers and chain shredders, both fixed and movable.

Tecnoagri has conceived and manufactured agricultural, agri-food, industrial and green maintenance equipment since 1984. The success gained comes from the willingness to keep on innovation to fully satisfy the customers' needs. The products are made using top-quality raw materials and highly professional and skilled workers: products stand out due to their reliability, ease of use and long service life.

The current production focuses on the covering of 4 fields:

**Handling:** hydraulic forklifts, hydraulic buckets, hydraulic side-tippers for the agro-food, horticulture, fruit farming, open field.

**Earthmoving:** backhoes and accessories for agri-industrial field.

**Soil Cultivation:** hydraulic in and out tree cultivators for ecological weeding in vineyards and orchards.

**Green Maintenance:** shredders, hydraulic reach mowers, branch cutter bars, cutting heads for agricultural and road works.

Actually about 60% of the products are exported in Europe, South Africa, South America, Asia and Australia.
